Student's Weekly Logbook

Name of the Student	HEMARAJ A/L RAJAN
ID of the Student	243UC247BQ
Name of the Company	JJ SECURITY SDN BHD SUBANG JAYA
Period of Training	3 MONTHS
Name of the Company Supervisor	Tc Sivanesan Tamilselvam
Name of the Faculty Supervisor	Wong Keng Tuck
Week Number/Report Period	4
Brief Description of Tasks done during the Week	1. As for the first day on this week, I have modify once again the admin management component by including the edit and delete functionality. As of now the function works in a way that super admin can assign each site to each admins. 2. I have also added extra host management feature by which each sites will have its own hosts so that some visitors will be aligned to each host. Delivery riders are exceptional from this as they don't really have any host needed for that entry workflow. 3. As for the manual registration workflow, I have begin to do the logic for the form submission and each form submission will be tied to each site. 4. In addition, I have also added the host display for each checkin process as each admin would see different checkinprocess as they are aligned to different sites. I

	have also started to implement the websocket feature so that when the visitor of particular site submits their details, the admin of that site should see the currently results-submmited visitor. On right here, I am currently facing some issues as the the data not being saved and at the same time the admin could not see the details of the visitor that submit details of that site. 5. The saving workflow somehow works as the data is being saved in database for now yet the UI causing no displays at this moment. I am currently debugging this issue at this moment.

Reflections (Problems encountered if any, Reasons for non-completion of planned tasks if any, Lessons learned, Tasks planned for the next week etc.)	As for my week 4, yes there are several problems that I have encountered. For example, Websocket which is responsible for real – time updates is not working properly as intended. While the saving the logic into the database works the UI currently has no displays at this moment. This suggests there might be some JavaScript error. As for the task planned next week, I have been planning to finish the checkin process properly as the hardware integration highly depends on this checkinprocess too.
Remarks from Company Supervisor (if any)
